

CLAIMS

The following listing of claims will replace all prior versions and listings of claims in the application.

1. (currently amended) A portable apparatus for viewing digital content received from a data communication network, the portable apparatus comprising:

a non-volatile storage medium capable to store digital content received from a data communication network;

a display communicatively coupled to the non-volatile storage medium and capable to display images of the digital content, wherein the digital content was previously downloaded from the data communication network and wherein the digital content is displayed using a browser while the portable apparatus is not connected to the data communication network;

a processor, communicatively coupled to the non-volatile storage medium, that executes the browser; ~~and~~

~~a content browsing engine executable by the processor and capable to select digital content stored in the non-volatile storage medium.~~

2. (original) The portable apparatus of claim 1 wherein the data communications network includes the Internet.

3. (original) The portable apparatus of claim 1 wherein the digital content includes data relating to any one of a website, an electronic document, a digital photograph, multimedia content, or digital music.

4. (original) The portable apparatus of claim 1 wherein the digital content is stored in the non-volatile storage medium as a content bundle.

5. (currently amended) The portable apparatus of claim 1 wherein the non-volatile storage medium is flash memory ~~the digital content is viewed while the portable apparatus is not connected to the data communication network.~~

6. (currently amended) The portable apparatus of claim 1 wherein ~~the digital content was previously downloaded from the data communication network~~ the apparatus further comprises a touch screen to receive user input.

7. (currently amended) The portable apparatus of claim 1 wherein the display provides a maximized client window for the ~~content browsing engine~~ browser.

8. (original) The portable apparatus of claim 1 wherein the portable apparatus is communicatively coupled to a host processing device and wherein digital content is downloaded to the non-volatile storage medium in response to print commands issued in the host processing device.

9. (original) The portable apparatus of claim 1 wherein the portable apparatus is communicatively coupled to a host processing device and wherein the portable apparatus is capable to perform a first operation in response to a command from a first user and the host

processing device is capable to perform a second task in response to a command from a second user.

10. (currently amended) The portable apparatus of claim 1 wherein the processor executes the ~~content browsing engine~~ browser so that the client window of the ~~content browsing engine~~ browser remains on display during the operation of the portable apparatus.

11. (original) The portable apparatus of claim 1 wherein the ~~content browsing engine~~ browser is capable to call upon a helper engine to assist in decoding the digital content.

12. (currently amended) A method of viewing digital content received from a data communication network, the method comprising:

connecting to a data communication network with a portable apparatus;

receiving digital content from a data communication network using a browser and storing the digital content in a non-volatile storage medium on the portable apparatus, wherein the digital content is displayed using a browser executing on the portable apparatus when the portable apparatus is not connected to the data communication network;

~~executing a content browsing engine to select digital content stored in the non-volatile storage medium;~~ and

displaying an image of the digital content in a display.

13. (currently amended) An apparatus for receiving data cast transmission, comprising:

a base station including a receiver;

a portable browser device capable to be coupled to the base station and including a non-volatile storage; and

a filtering engine communicatively coupled to the nonvolatile storage and capable to store into the non-volatile storage content bundles requested by a user, the content bundles being transmitted from a data cast transmission received by the receiver, wherein the data cast transmission is a high definition television (HDTV) transmission.

14. (currently amended) A method of receiving data cast transmission, the method comprising:

receiving a data cast transmission including content bundles, wherein the data cast transmission is a high definition television (HDTV) transmission;

filtering the received content bundles so that selected content bundles are stored in a portable non-volatile storage; and

viewing at least some of the stored content bundles in a display.

15. (original) The method of claim 14, further comprising:

transmitting a feedback information to a broadcaster content bundles in response to receiving the selected bundles.
